

The paragraph below refers to findings from a study performed on 35,000 Pfizer employees:

“Pfizer’s ergonomics program demonstrated a return on investment (ROI) of 3.51 to 1 and a net savings of \$1,153,206 for participants. The physical therapy program generated an average ROI of 3.61 to 1 (2001), and produced over \$579,000 in savings related to employee lost time avoided by on-site access to services. In 1998, the ROI for the fitness centers program was 4.29 to 1.”
